DETAILED ACTION

This communication is in response to applicant's paper filed on 11/08/2007.

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/08/2007 has been entered.

Status of Claims:

Claim 7 is cancelled.

Claims 1-6 and 8-14 are pending.

Allowable Subject Matter

Claims 1-6 and 8-14 are pending and have been allowed.

The following is an examiner's statement of reasons for the indication of allowable subject matter allowance:

Independent claims 1, 10, 11, 12, and 13 and their dependent claims 2-6, 8-9 and 14 are allowed because the following closest prior art of record, US Patent 6,360,210 (Wallman) and US Patent 5,704,045 (King et al.) and other considered prior arts (see history of prosecution) in any combination failed to teach or render obvious to one of ordinary skill in the art,

“receiving a bid to assume a portion of the risk as part of a risk transaction into the host computer, wherein the bid is based on a yield required; and ensuring compliance of the risk transaction with a set of applicable risk auction rules and procedures applicable to a relevant category of risk transactions.”

As this limitation in relation to other limitations in the independent claims would not have been obvious.

NPL (Prior art)

Martin Bichler ‘Trading Financial Derivatives on the Web—An Approach Towards Automating Negotiations on OTC Markets’, April 2000, discloses “Derivative instruments have become increasingly important to financial institutions, institutional investors, traders and private individuals throughout the world, both as risk-management tools and as a source of revenue. The volume of over-the-counter (OTC) traded derivatives has increased enormously over the past decade, because institutional investors have often had a need for special derivative products which are not traded on organized exchanges. An important feature of OTC trading is the

bargaining on multiple attributes of a contract such as price, strike price and contract maturity. Negotiation on multiple attributes of a deal is currently not supported by electronic trading floors. In this paper we describe an approach of how to automate the multi-attribute multilateral negotiations using a Web-based trading system. First, we will give an overview of various approaches to supporting or automating negotiations on multiple attributes. Then we will introduce multi-attribute auctions, an extension of single-sided auction theory and analyze preliminary game-theoretic results. Finally, we will show a Web-based electronic trading system for OTC derivatives, based on multi-attribute auctions."

Sam Kinney ("RIP fixed pricing: The Internet is on its way to "marketizing" everything", Business Economics. Washington: Apr 2000. Vol. 35, Iss. 2; pg. 39, 6 pgs) discloses the Internet has made business-to-business auction-based transactions a new force in markets. The result is to force some markets to be much more competitive, punishing firms that heretofore had been able to rely on imperfect information to mitigate inability to compete on cost and quality. It has also created a new type of Internet-based intermediary firm to set up auctions, qualify participants, and conduct the auctions. How seller-bidding reverse auctions are conducted is described, the cost savings that are possible for buyers is illustrated, and the implications of this new type of commerce are discussed.
